

PURPOSE:

Not only do louvers bring a decorative aspect to your structure, but louvers also provide ventilation in attic spaces as required by the United States Building Code.

Use the following formula, provided by the United States Building Code, to calculate which size louver(s) your building requires:

- One (1) square foot of free ventilation for each three hundred (300) square feet of attic floor space, to be divided equally between the upper roof area and under the eaves.

Typical
Cross
Section

FEATURES:

GENERAL:

Spec-Trim stocks louvers in maintenance, rot-proof PVC. Our PVC louvers are paintable, but can be used in their natural state. Spec-Trim manufactures custom louvers in any size and/or shape. Cedar, redwood and primed louvers are also available.

SLATS:

Extruded in prefinished PVC with weather-stop for added protection in severe weather.

SILL:

Extruded in prefinished PVC with a drip groove and a siding groove for a cleaner, virtually weather-tight joint.

SCREEN:

Eight x eight (8 x 8) Natural Mesh Fiberglass.

BRICKMOULDING:

PVC WM180 Brickmoulding is standard, however, other profiles are available in PVC and wood. Straight and radius mouldings of all profiles are available in wood.

• Note: Louvered products are not weatherproof. Certain weather conditions may force water infiltration.

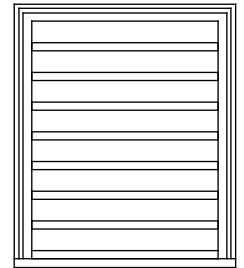

GENERAL LOUVER PRICING NOTES:

- All Louvers are stocked in Cellular PVC With a Square Back.
- For Wood, Primed Wood and Cedar Louvers, add 50% to list price.
- For Redwood Louvers, add 100% to list price.
